

# Log Periodic Antenna

# CLP5130-x CLP3100

- ★ Wide Band
- ★ Low VSWR
- ★ High Gain
- ★ Small Size
- ★ Light Weight
- ★ Easy Assembly

CD MODEL CLP5130-1 is a high gain, wide band VHF and UHF log periodic type beam antenna. As a standard, the antenna is designed for horizontally polarized base station use but by means of an adapter, vertical polarization is also possible. The antenna is usable in the amateur bands from 50 thru 1300 MHz and is also suitable for FM broadcasting, scanning, VHF/UHF television air band communications, government applications, and business band use.

Forward gain of the CLP5130-1 from 50 to 1300 MHz is 10 to 12 dBi (this is 10 to 16 times the gain compared to a nondirectional discone type antenna). The VSWR of the antenna is less than 2.0:1 across the band. Mechanically, the log periodic uses a specially shaped high quality aluminum boom that allows for movement of the phasing line. In addition, distortions in the vertical and horizontal planes have been minimized, and adjustment of the element alignment is not necessary. The assembly of the antenna is easy. The boom to mast bracket is made of a lightweight and rugged magnesium alloy.

Model CLP5130-2 is very compact and high performance log periodic antenna which covers from 105 thru 1300 MHz while model CLP5130-3 covers from 90 thru 220 MHz.
